

## APL WebServices Benefits

- The high-performance, high-reliability, web services component
- Access APL+Win calculation/business rules across the Internet or private network
- Create a Web-browser or PDF forms GUI and connect it to APL+Win on the server
- APLNext WebTransfer included for ActiveX & .Net classes for http requests
- Support http/https protocol including SOAP and binary serialization
- Programmer-controlled APL+Win instance pooling for load balancing
- Fully-scalable to multiple servers when client request levels require it
- Active logging of server activity and client requests for testing & accounting
- Programmer-customizable timeouts, headers, document types & error messages
- Visible server option for program development & testing
- WebServices Administration tool included for local & remote server maintenance
- Based on .Net for multi-threaded APL+Win instance operation
- Programmer-controlled stateless or stateful processing of client requests
- Automatic queueing of client requests for reliability & maximum through-put
- Includes full documentation & programming examples
- Community forum available for all APL WebServices programmers

## Choose the Licensing Option That's Right For You

	Application	Commerce	Enterprise
Support ASP/ASPX	n/a	n/a	Yes
SSL/https support	n/a	Yes	Yes
Multiple domain support	n/a	n/a	Yes
1 <sup>st</sup> Developer License	\$2,500/year	\$2,500/year	\$2,500/year
Additional Developer License	\$2,000/year	\$2,000/year	\$2,000/year
Production Server License	\$500/year/server	\$1,500/year/server	\$3,000/year/server
\$500 credit towards Production Server License	Yes	Yes	Yes
Support Incidents/Year	2	5	5
Additional Support Incidents	\$125@	\$125@	\$125@

**To discuss your specific APL WebServices product licensing needs, please contact us today.** Email [sales@apl2000.com](mailto:sales@apl2000.com), Telephone 301- 208-7150, International <http://www.apl2000.com/intldealers.php>

## APL WebServices Licensing Notes

- 1) A full featured **evaluation version** of APL WebServices is available by downloading the installer at <http://forum.apl2000.com/viewtopic.php?f=5&t=1079>
- 2) **Prices** illustrated apply in the United States and may be different in other areas. Products illustrated may not be available in all areas. Product specifications and availability and associated prices are subject to modification by APLNext LLC.
- 3) The developer and product licenses for APL WebServices are annual in term and require web- or telephone-based activation.
- 4) A **support incident** is an ad hoc consulting session presented to a specific customer associated with a single issue reported by that customer. Reporting of an error in an APLNext LLC product is not a support incident and there is no limit on reporting of such errors. The APLNext LLC product development team wants to hear about, obtain documentation on and rapidly resolve any such issues.
- 5) APL WebServices programmer licensees may view, post and download from the **APL2000 Developer Network (APLDN) Forum**. The forum includes product installers, additional product documentation, sample projects and contributions from product licenses. To access the **APL2000 Developer Network (APLDN) Forum** go to <http://forum.apl2000.com/viewforum.php?f=5>
- 6) **Conferences and Training Sessions** are subject to availability and scheduling by APLNext LLC.
- 7) Fulfillment of all benefits of a product license depends on proper **activation** of the license.
- 8) Product functionality may require **associated software and licenses**, for example APL+Win must be licensed on the server machine to properly utilize APL WebServices on that machine.
- 9) The **products from APLNext Partners**, if any, are available subject to the terms and conditions determined solely by these Partners. Partner's products are not warranted, guaranteed or supported by APLNext LLC.
- 10) To view the full text of the APL WebServices **EULA** go to <http://forum.apl2000.com/viewtopic.php?t=402>

- 11) Effective use of the APL WebServices product generally requires consultation between the customer/developer and the APLNext product team to determine the appropriate deployment. Besides a production license for the product, at least one developer license must be in effect during the license period. A separate product license is required for each physical or virtual server supporting the application.
- 12) End-user license fees apply.
