

## VisualAPL: Change the Name of a Class

To change the name of a previously-created VisualAPL class follow the steps illustrated below after opening your VisualAPL project in Visual Studio.

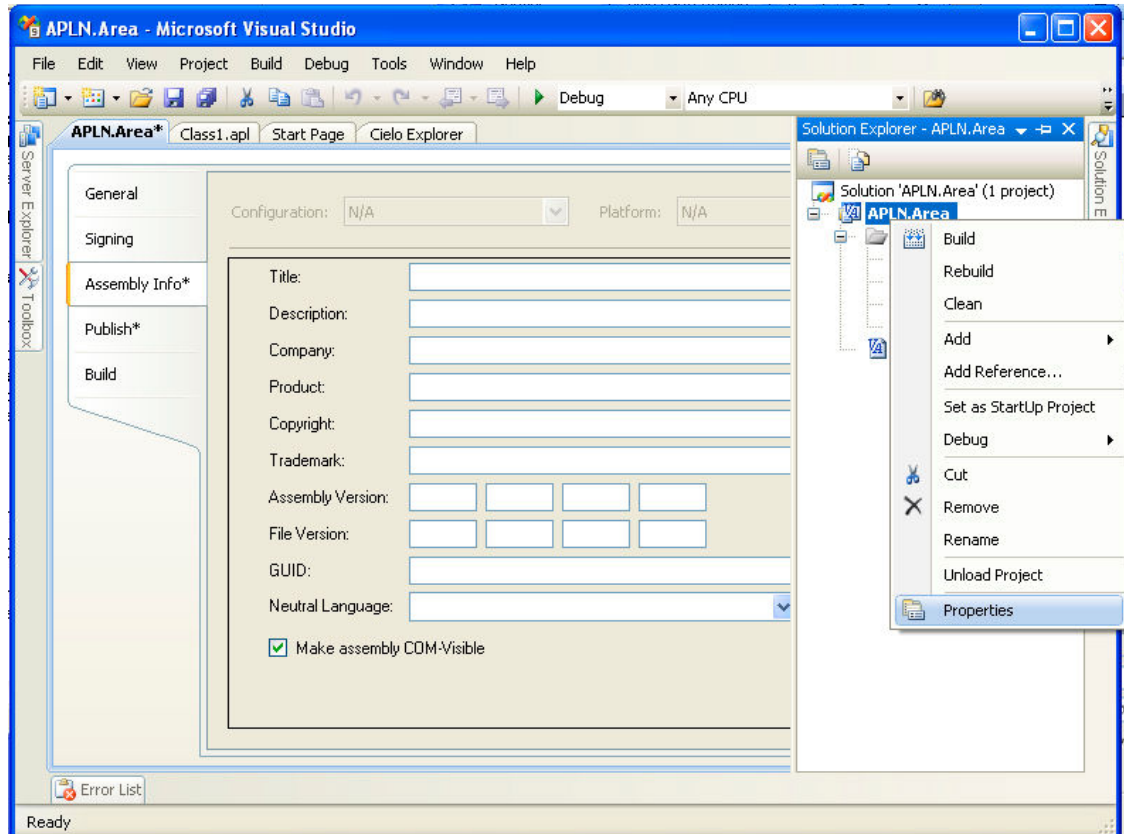

First, use the Microsoft Visual Studio Solution Explorer to edit the name of the class to reflect the new class name:

Second, in the Class1.apl code window, edit the name of the class to reflect the new class name:

Finally, right click on the VisualAPL “APLN.Area” project in the Microsoft Windows Solution Explorer and click the “Properties” pop-up menu item to display the project properties dialog:

In the project properties, click the “General” tab and edit the start-up object name to reflect the new class name:
